

# Constraining the Properties of Dark Energy using SNAP

**Dragan Huterer**

(Case Western Reserve University)

# Dark Energy:

Parameterize with

$$\Omega_X = \rho_X / \rho_c \qquad w = \frac{p_X}{\rho_X}$$

$$H^2(z)/H_0^2 = \Omega_M(1+z)^3 + \Omega_X \exp \left[ 3 \int_0^z (1 + w(z')) d \ln(1+z') \right]$$

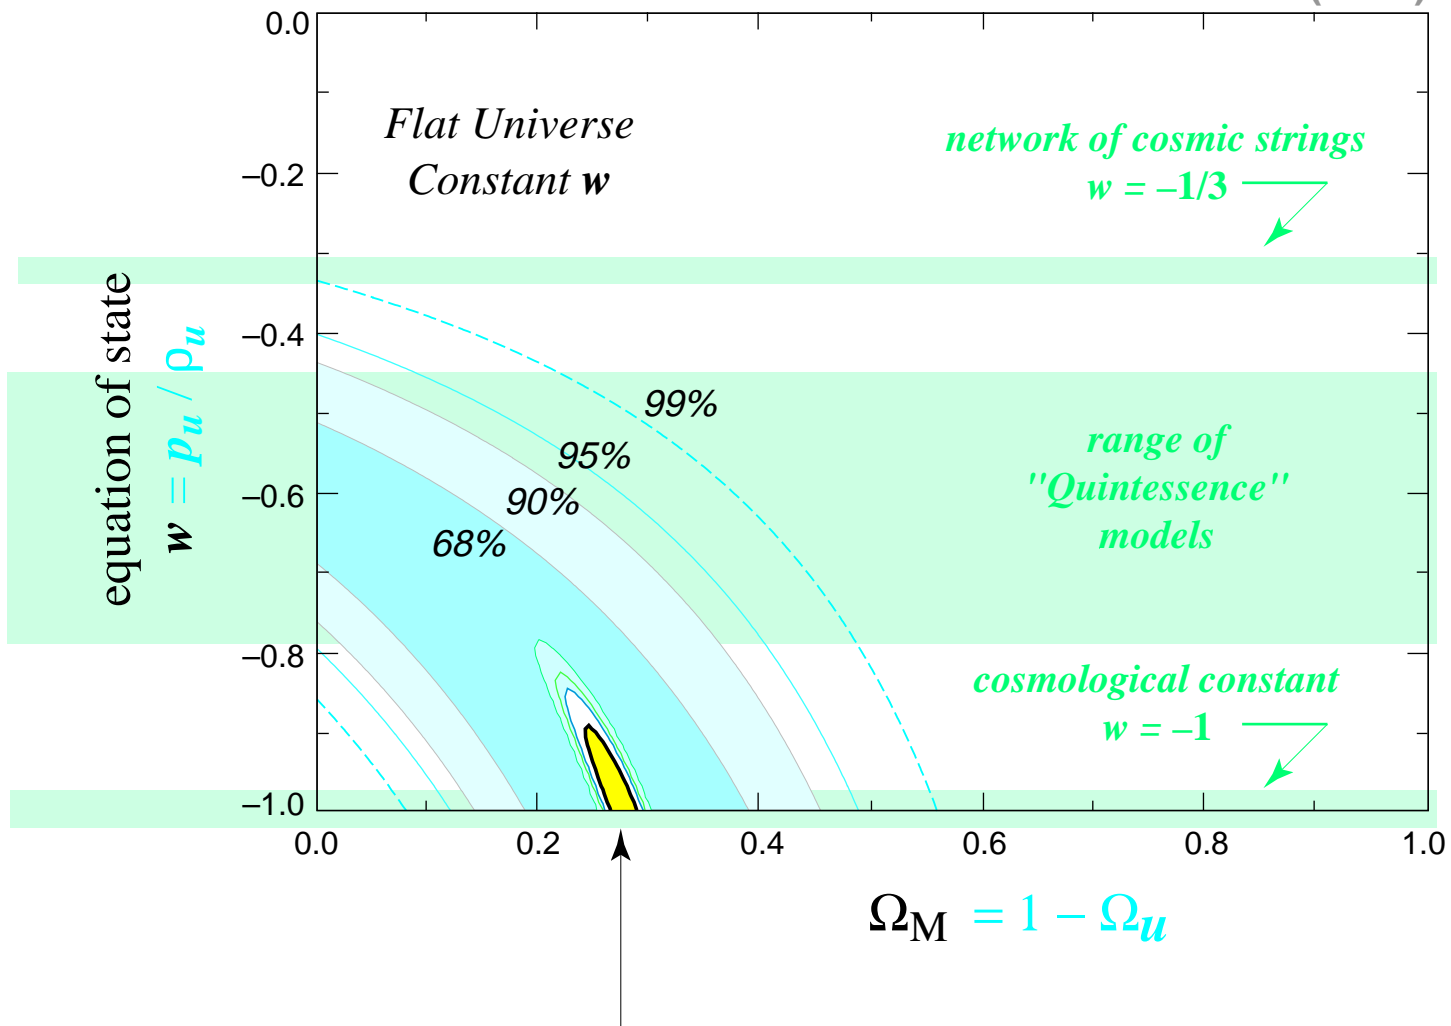

$$r(z) = \int_0^z \frac{dz'}{H(z')}$$

- $\frac{\ddot{a}}{a} = -\frac{4\pi G}{3}(\rho_M + \rho_X + 3p_X)$   
 $\Rightarrow p_X$  (and  $w$ ) are strongly negative
- Current SNe Ia data:  $w \lesssim -0.6$
- $\rho_X / \rho_M \propto (1+z)^{3w}$   
 $\Rightarrow$  dark energy is important only at  $z \lesssim 2$

# Dark Energy

Unknown Component,  $\Omega_u$ , of Energy Density

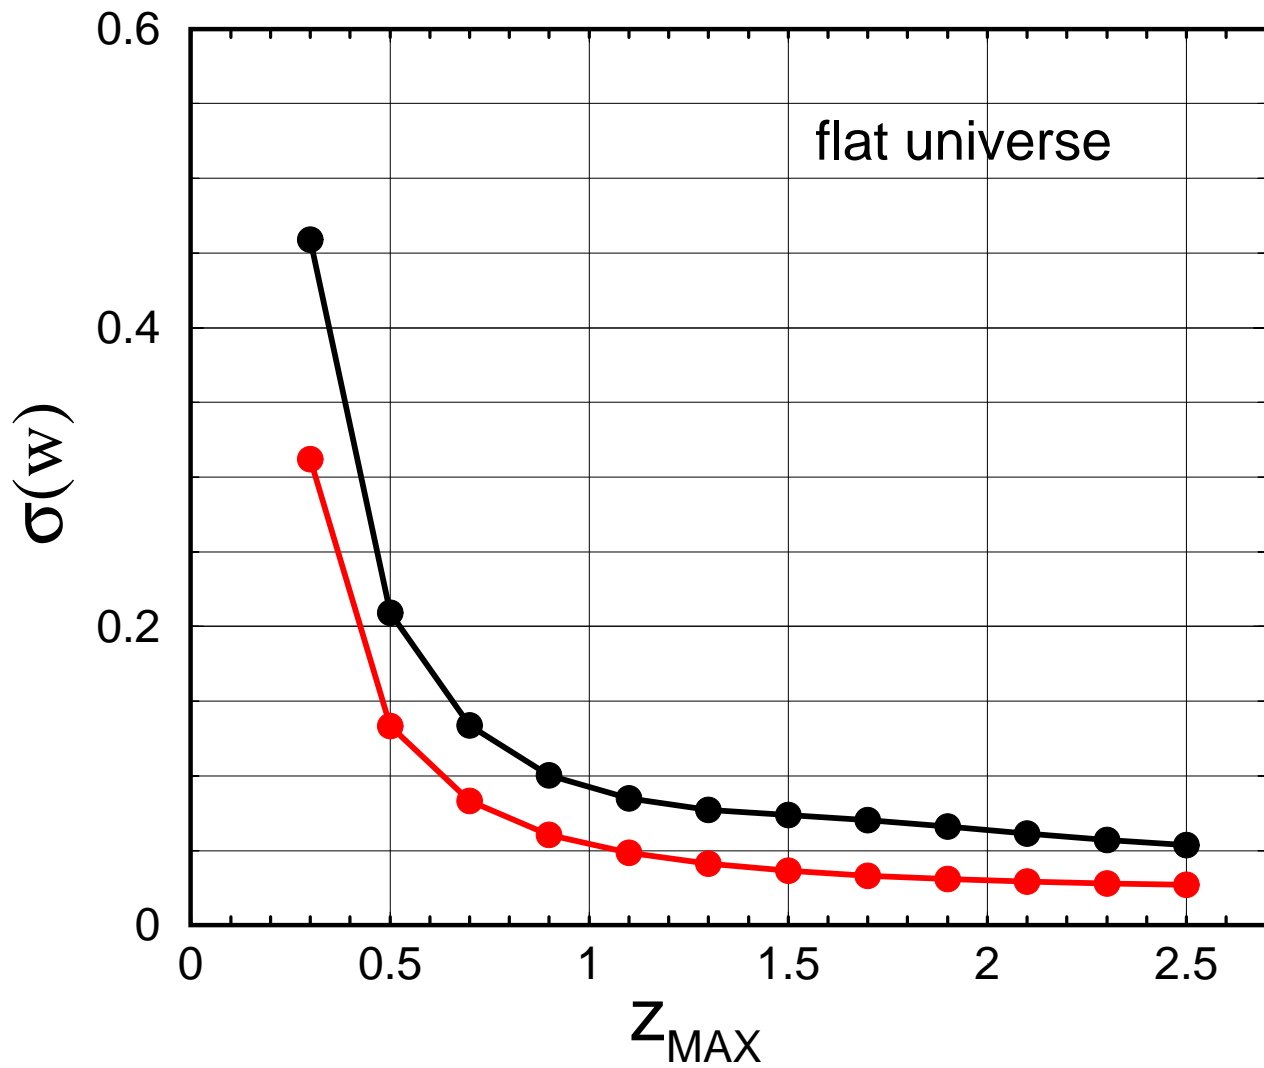

Supernova Cosmology Project  
Perlmutter *et al.* (1998)

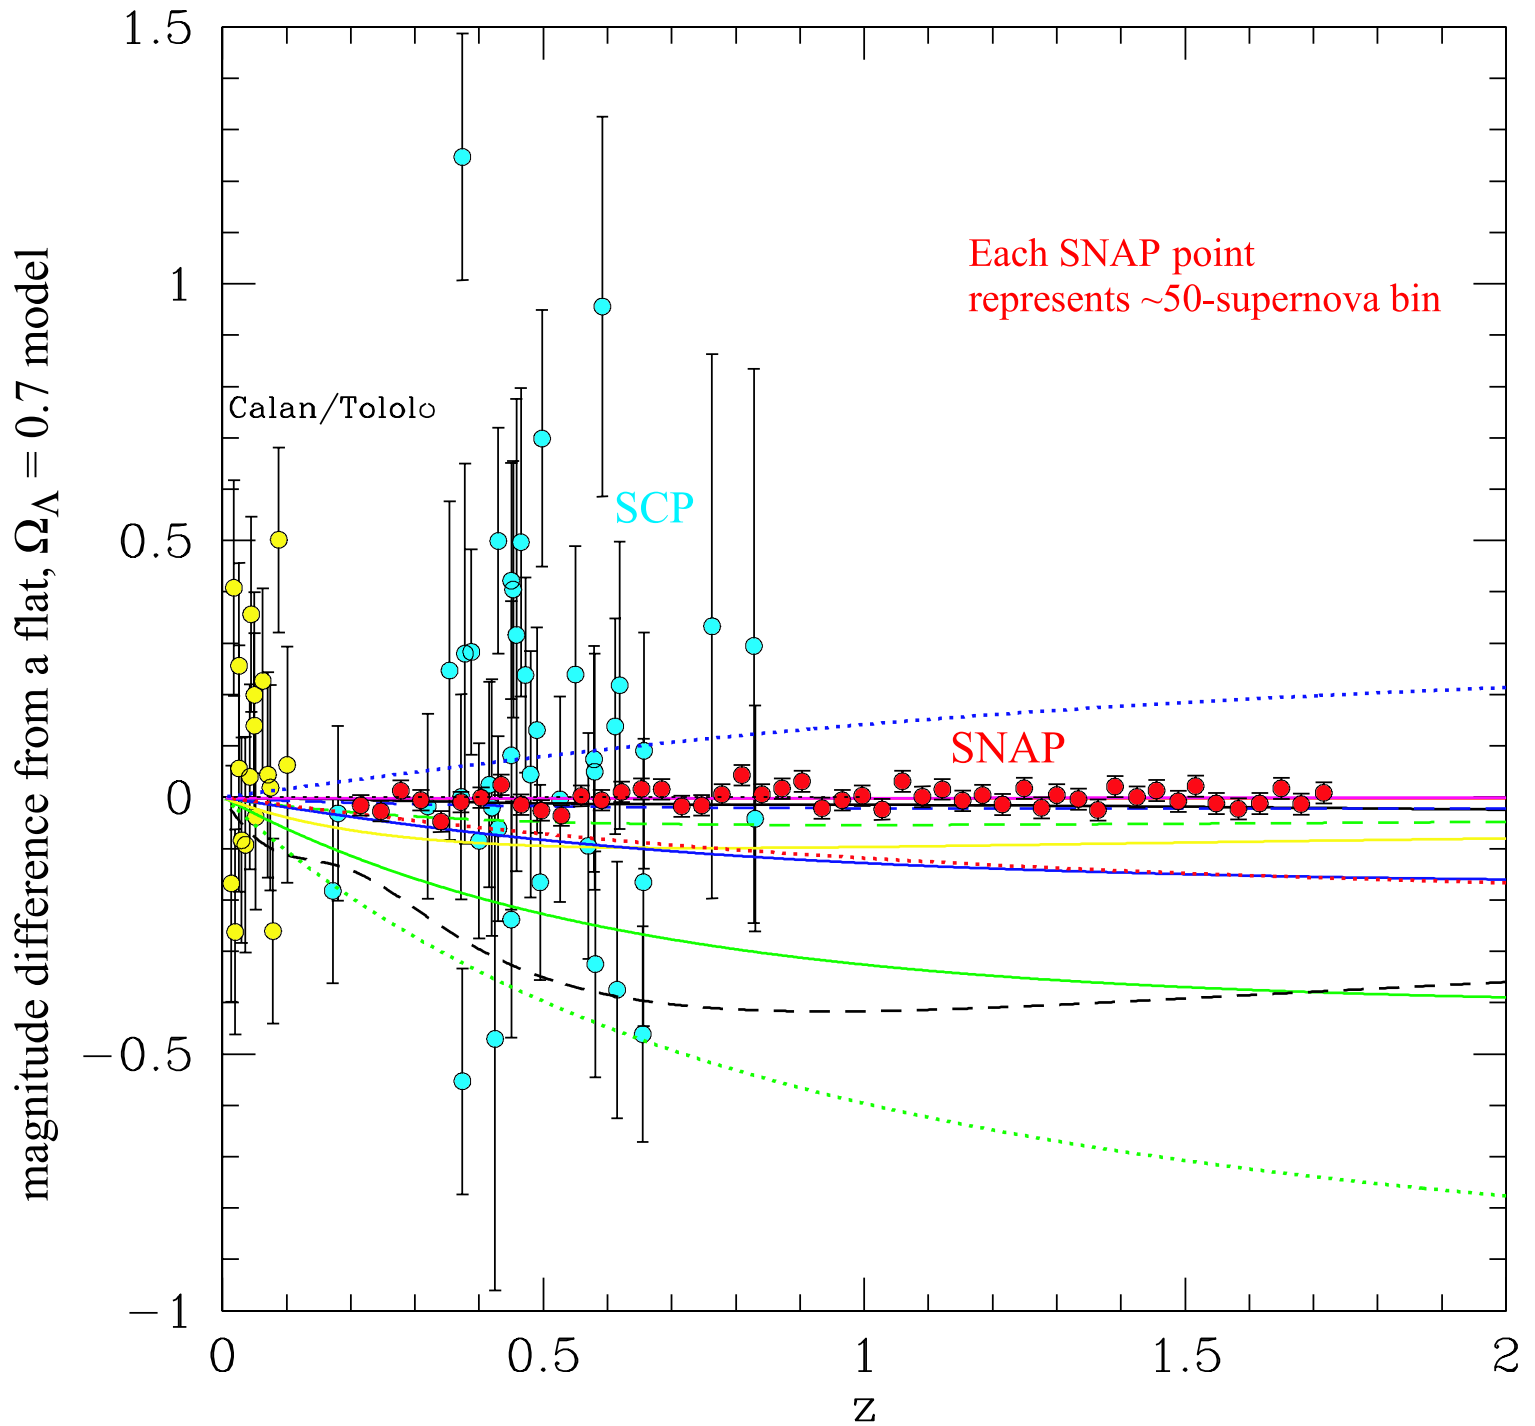

**SNAP Satellite**  
**Target Statistical Uncertainty**

## The Wish List:

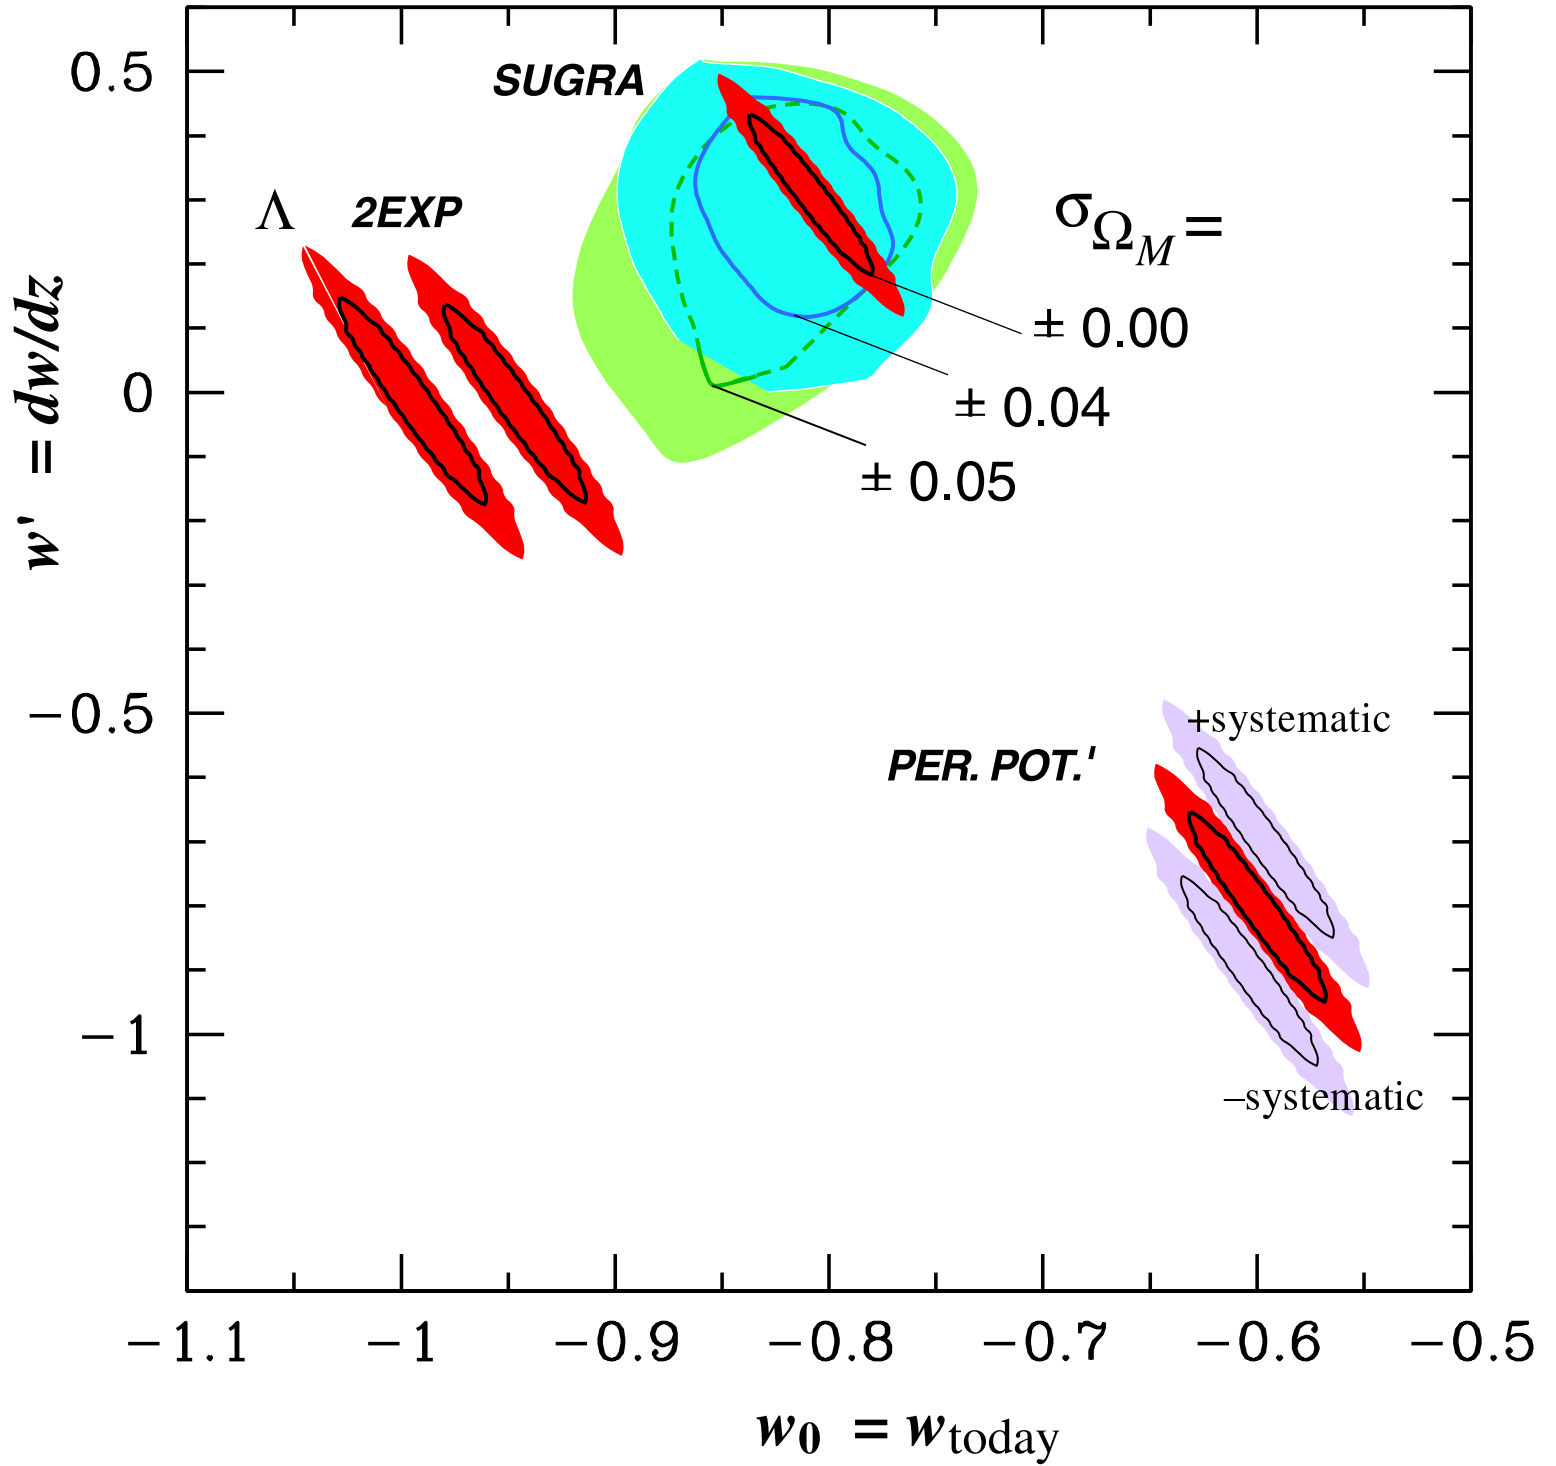

- 1) A large, well-calibrated set of type Ia SNe...
- 2) ...covering the interval  $0 < z \lesssim 2$

Current **ground-based** data  
compared with **binned simulated SNAP** data  
and a sample of Dark Energy models.

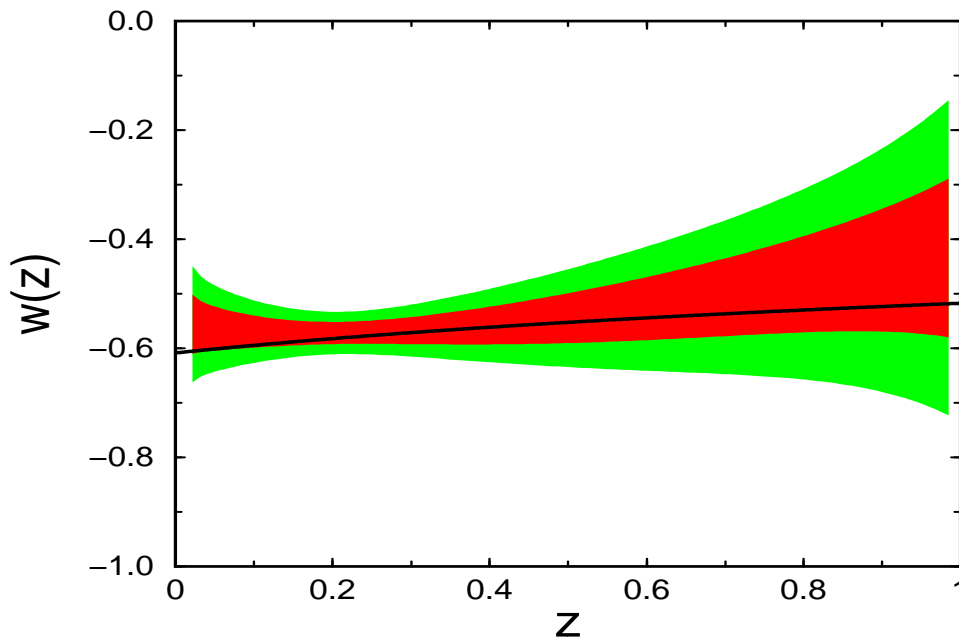

based on  
Weller & Albrecht (2001)

# Probing $w(z)$ : Reconstruction

(Starobinsky 1998; Huterer and Turner 1999; Chiba and Nakamura 1999)

$$1 + w(z) = \frac{1 + z}{3} \frac{3H_0^2 \Omega_M (1 + z)^2 + 2(d^2 r / dz^2) / (dr / dz)^3}{H_0^2 \Omega_M (1 + z)^3 - (dr / dz)^{-2}}$$

This approach is:

- **general:** no assumptions about  $w(z)$  needed

but also

- **challenging in practice:** Reconstruction depends on the second derivative of  $r(z)$ . Need to smooth the data first.

# Conclusions

- For now, Dark Energy is described by  $\Omega_X$  and  $w$
- Covering the redshift range  $0 < z \lesssim 2$  is crucial:
  - a) to break parameter degeneracies
  - b) to distinguish between Dark Energy models
- The ultimate goal is to constrain  $w(z)$ :  
SNAP could constrain  $w_0$  and  $w'$  to about 0.03 and 0.12
- Complementary information on  $\Omega_M$  and  $\Omega_{TOT}$  will be very important, especially in order to get  $w(z)$   
 $\Rightarrow$  LSS, CMB  
but also weak lensing with SNAP!
